Problem Statement

• Over the years, the company has collected basic bank details and gathered a lot of credit-related information. The management wants to build an intelligent system to segregate the people into credit score brackets to reduce the manual efforts.

Data Description

- Data has 2 Files Train Data and Test Data. Train data has 28 Columns and Test data has 27 Columns
- Columns:-
 - ID: Represents a unique identification of an entry
 - Customer ID: Represents a unique identification of a person
 - Month: Represents the month of the year
 - Name: Represents the name of a person
 - Age: Represents the age of the person
 - **SSN**: Represents the social security number of a person
 - Occupation: Represents the occupation of the person
 - Annual_Income: Represents the annual income of the person
 - Monthly_Inhand_Salary: Represents the monthly base salary of a person
 - Num_Bank_Accounts: Represents the number of bank accounts a person holds
 - Num_Credit_Card: Represents the number of other credit cards held by a person
 - Interest_Rate: Represents the interest rate on credit card
 - Num_of_Loan: Represents the number of loans taken from the bank
 - Type_of_Loan: Represents the types of loan taken by a person
 - **Delay_from_due_date**: Represents the average number of days delayed from the payment date
 - Num_of_Delayed_Payment: Represents the average number of payments delayed by a person
 - Changed_Credit_Limit: Represents the percentage change in credit card limit
 - Num_Credit_Inquiries: Represents the number of credit card inquiries
 - Credit_Mix: Represents the classification of the mix of credits
 - Outstanding_Debt: Represents the remaining debt to be paid (in USD)
 - Credit_Utilization_Ratio: Represents the utilization ratio of credit card
 - Credit_History_Age: Represents the age of credit history of the person
 - Payment_of_Min_Amount: Represents whether only the minimum amount was paid by the person
 - **Total_EMI_per_month**: Represents the Equated Monthly Installments payments (in USD)
 - Amount_invested_monthly: Represents the monthly amount invested by the customer (in USD)
 - Payment_Behaviour: Represents the payment behavior of the customer (in USD)
 - Monthly_Balance: Represents the monthly balance amount of the customer (in USD)
 - Credit_Score: Represents the bracket of credit score (Poor, Standard, Good)

Importing Libraries

```

    #plt.xticks(rotation=45)
    plt.title("Credit Mix", size=27,fontweight="bold")
    plt.xlabel("Credit Mix Categories", size=27,fontweight="bold")
    plt.ylabel("Count", size=27,fontweight="bold")
    plt.show()
```

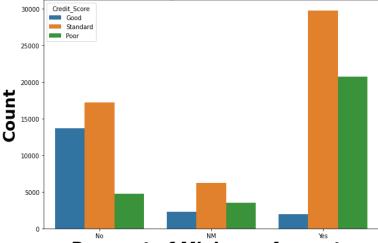

Comment:

- People who don't have a credit mix most of them has a Standard Credit score and the 2nd most category has a bad credit Score.
- People who have a good credit mix most of them have a good credit score and the 2nd most category has a standard credit score.
- People who have astandard mix most of them has a standard credit score and the 2nd most category have a bad credit score.
- People who have a bad credit mix most of the has a bad credit score and the 2nd most category have a standard credit score.

```
In []: plt.figure(figsize=(10,7))
    sns.countplot(data = df, x = 'Payment_of_Min_Amount',hue="Credit_Score")
    plt.title("Credit Score for Payment of Minimum Amounts", size=27,fontweight="bold")
    plt.xlabel("Payment of Minimum Amounts", size=27,fontweight="bold")
    plt.ylabel("Count", size=27,fontweight="bold")
    plt.show()
```

Credit Score for Payment of Minimum Amounts

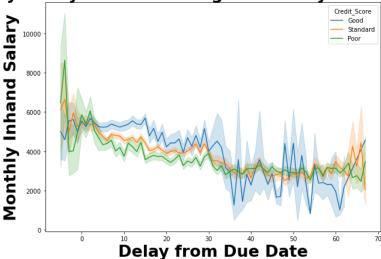

Payment of Minimum Amounts

Comment:

• Customers who pay the minimum amounts has a poor credit score which but the people who don't pay the minimum amounts has a good credit score more than the others which mean that there are a lot of people who stay in debt for a long time as they don't pay the all amounts and they pay part of it which made an insterest on them.

```
In []: plt.figure(figsize=(10,7))

	17	95-120	Standard	5851.26	2.418140e+05	17	19

Comment:

• Customers Between age of 30 and 45 the most category who have a lot of outstanding debts which mean that people in their youth age have a high purchase power and Cutomers between 45 to 55 their outstaning debt is less than young people.

Comment:

• Customers between age 30 and 45 has the most Annual Income and the 2nd more group age are customers between 14 and 25 which mean not people from 25 and 30 which indicate that there are people who can make money in a young age more than the old people but as the same time as indication that the 2 largest Categories most of their credit score are Standard or Poor but the as for the people between 45 and 55 have more good credit score than the young people from 14 to 25

```
In []: g = sns.relplot(data=df, x="Num_Bank_Accounts", y="Num_Credit_Card", col="Credit_Score", height=7, aspect=1)
g.set_axis_labels( "Number of Bank Accounts", "Number of Credit Card", size=27, fontweight="bold")

Credit_Score = Good

Credit_Score = Standard

Credit_Score = Poor
```

Comment:

• Most peopel have Accounts from 0 to 10 Accounts and the number of credit cards also from 0 to 10 which mean each account has at least one credit card
